## SEED TO SHELF

### IN NEW YORK STATE

Co-Founders Oksana Pidhoreckyj and Adam Corrigan

Could a boutique collection of CBD products ever rise to the level of a luxury brand? An Hermes of Hemp? A Prada of Natural Plant remedies? That is exactly what co-founders Adam Corrigan and Oksana Pidhoreckyj, two veterans of New York City’s media industry, set out to do when they launched Roman Empire Farms CBD in 2020. Having personally experienced the myriad positive effects of using CBD themselves, they made the decision to pursue their dream of creating their own organically grown, natural plant tonics, helping others live happier, healthier lives with the amazing medicinal benefits of the hemp plant.

Committed to the purest and most effective CBD products, manufactured with top-of-the-line technique and craftsmanship, Roman Empire Farms has been celebrated as one of the most stylish and successful wellness launches in recent years.

Born in Brooklyn, Oksana spent summers on the 200 acre farm her Ukrainian born parents bought in New York’s Montgomery County in 1970. The brand derives its name from the patriarch, Roman and the fact that the products are New York grown and manufactured. On the farm the tomatoes, onions, cabbage, beets, cucumbers, and dill the family grew were consistently bountiful thanks to the soil’s balanced mineral content. Adam and Oksana realized this same fertile soil would be perfect to grow hemp.

Through extensive research and test crops, Adam and Oksana worked to make sure their CBD was as pure and potent as possible. They have created a business model of true ‘seed to shelf’, hand crafted, small-batch hemp products. Most CBD brands source their oil from other growers and simply white label their products. “We wanted to have a product that started and finished with our personal touch. We source our seeds from one of the most reputable distributors in the USA and plant and harvest our crops by hand,” says Adam. Once harvested, the flower is ‘bucked’ from the stalks with a device Roman created. The flower is then dried and transported to a premier facility in New York to be processed into usable CBD oil. All products are scientifically formulated and once manufactured, they are sent to a third-party lab to be tested for potency and safety. Every step of the process happens in New York State.

Cannabidiol (CBD) is a naturally occurring compound found in the hemp plant flowers. Unlike its ‘cousin’ Tetrahydrocannabinol (THC), CBD is non-psychoactive, non-addictive, and safe for everyday use in humans and pets. Our Endocannabinoid system is one of the body’s largest neurotransmitter networks that balances many of the body’s functions. Endocannabinoid receptors regulate sleep, appetite, pain, inflammation, memory, mood, and fertility. These receptors are located throughout the central and peripheral nervous system responsible for regulating our body’s communication between cells, keeping internal processes stable, and maintaining daily health and wellness.

Although hemp has been around for thousands of years with seeds being used as a food source since 6000 BCE, it has only recently become readily available to the masses after it was federally legalized in the USA. For many years there has been a stigma about CBD and a lot of people associate it with its THC counterpart. “CBD provides many medicinal benefits without the ‘high’ that is generally associated with marijuana,” says Oksana. Today, many embrace the hemp plant as it reliably promotes overall wellness by helping the body achieve homeostasis.

CBD is mostly used to treat stress, anxiety, insomnia, muscle pain, and inflammation. In recent years, studies have shown that CBD can even help fight cancer cells, treat symptoms caused by chemotherapy, and helps alleviate symptoms of neurological disorders including seizures, Parkinson’s Disease, and Multiple Sclerosis. Studies also document CBD’s positive results to treat anxiety and inflammation in pets.

Roman Empire Farms’ collection of full spectrum CBD tinctures are available in four different strengths and two flavors: natural and their bestselling cinnamon. For your furry friends, pet tinctures are available in natural or bacon flavor. Their 800mg ‘Mind-Relief’ roll-on, formulated with organic lavender and peppermint essential oil is popular for relaxation at the end of a long day and for muscle and joint pain relief. Roman Empire Farms’ anti-aging serum is currently in development and will release later this year.

Roman Empire Farms’ ultimate goal is to help support your well-being through the many therapeutic wonders of the hemp plant and the company is committed to growing the finest quality hemp for every product they produce.
